

# Magento 2 - Fullstory Script module

---

Module for installation [fullstory recording script](#) and identify users with [FS.identify](#) function. The script sends `customer_email`, `full name` and `customer ID` for logged users. For guests, it generates and sends incremental `ID` with `Guest` prefix based on `visitor_id` from table `customer_visitor`, e.g `Guest100234`. The guest ID is added to header welcome message. Configuration allows you to enable/disable the module and change script ID.

## Installation (manually)

---

1. Clone the repository to `app/code/Analytics/FullStory/`
2. Register module `php bin/magento setup:upgrade`
3. Compile code using `php bin/magento setup:di:compile`
4. Clean cache using `php bin/magento cache:clean`

## Configuration

---

1. Go to Stores -> Configuration -> Analytics -> FullStory
2. Enable module
3. Provide fullstory ID
4. Save
5. Clean/Flush cache
